Correlation of Delay and Customer Satisfaction Analysis

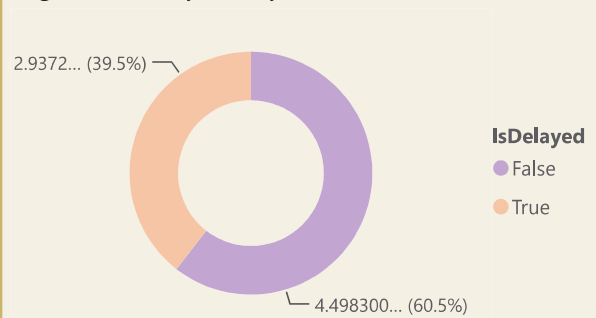

Average Customer Satisfaction

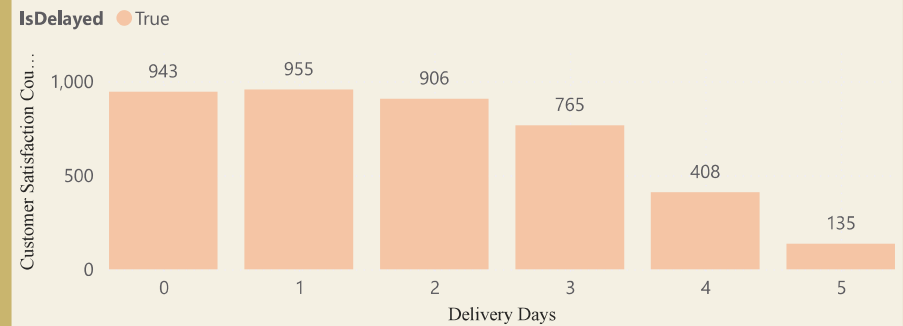

Very Good and Good Score of Customer Satisfaction

AvgSatisfaction by IsDelayed

Normal, Poor, Very Poor Score of Customer Satisfaction

- Customer satisfaction averages 4.17/5, where 1 is Very Poor and 5 is Very Good.
- Delayed orders score 2.94/5 (Good) compared with 4.50/5 (Good) for on-time orders, a 1.56-point satisfaction gap.
- The delay-satisfaction correlation is -0.74, indicating that longer delays are strongly associated with lower customer satisfaction.

Number of Orders and Breakdown by Vehicle Type

Total Breakdown by Vehicle Type Purchased Year

Number of Orders and Breakdown by Vehicle Type

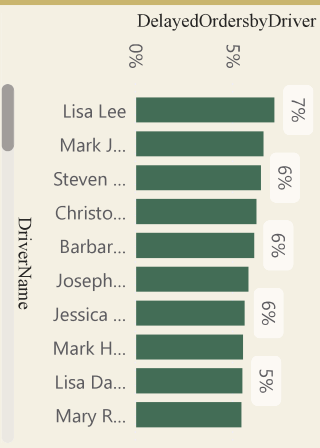

- Van is the main breakdown concern, with 312 breakdowns (~64% of the 485 categorized breakdowns), followed by Truck at 111 (~23% preventive maintenance and operational checks.
- The dashboard records 537 total breakdowns across 27,979 orders (~1.9%), but 52 breakdowns are outside the vehicle-type chart because 042 have no orders in the FACT-Orders table for 2023–2024; therefore, they should be treated as inactive/unutilized vehicles rather than
- FT-010 is the highest-breakdown vehicle, while Van is also the most frequently used vehicle type; management should prioritize Van/FT four inactive vehicles separately before assigning them back to operations.

Driver Performance Analysis

Delay by Driver & Performance Rating

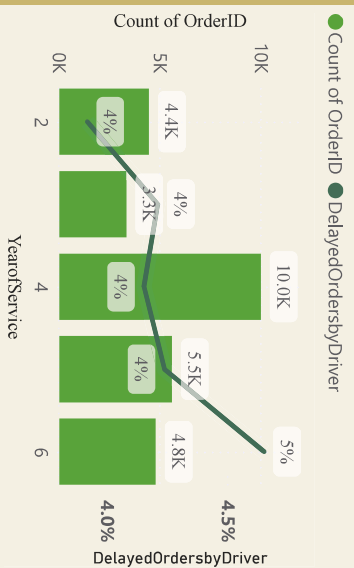

Delay Rate per Driver

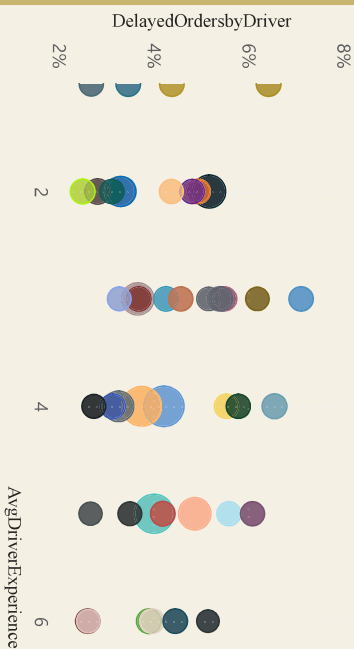

Average Driver Perform

Delay by Driver & Service Year

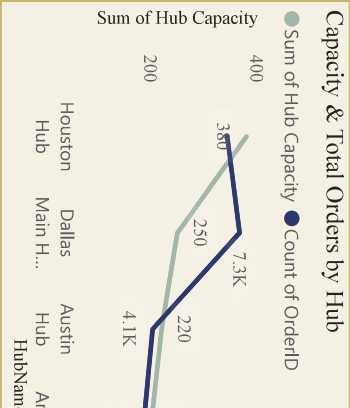

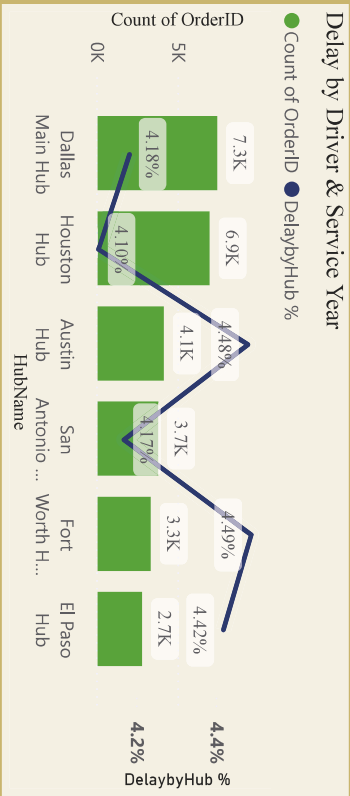

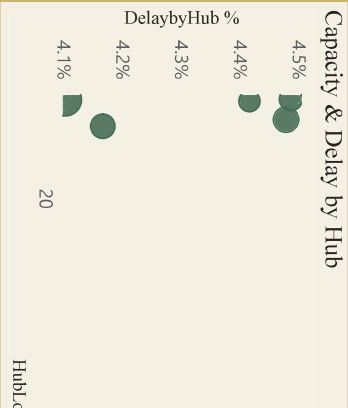

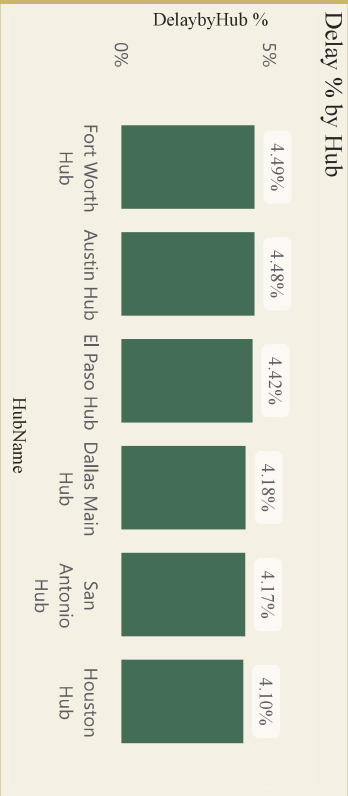

Exerience and Delay Rates of Drivers

- Overall driver performance is moderate at 3.58/5, while the overall driver delay rate is about 4%, indicating generally acceptable performance but need for improvement
- Performance rating 2 has the highest delay rate at 5%, compared with 3% for rating 1 and about 4% for ratings 3–5, the highest individual driver delay rate reaches 7%, high-delay drivers rather than all drivers.
- Delay rate increases to about 5% at 6 years of service, despite the largest order volume being around 4 years, suggesting that experience alone does not guarantee lower should be investigated.
- There is no strong clear downward trend. Delay rates remain around 3%–6% across different experience levels, so higher experience does not automatically mean lower

Hub Performance Analysis

- Houston Hub is the best performer at 4.10% delay while handling 6.9K orders, whereas Fort Worth (4.49%) and Austin (4.48%) have the highest delays.
- Dallas Main Hub is the most relatively loaded hub, with 7.3K orders against 250 capacity and a 4.18% delay rate; it should be monitored for high volume with lower delays.
